

Document Information

Field	Details
Document Name	Stakeholder Interview Questions
Project Name	Student Performance Analytics & Decision Support System
Client	Mega Central High School
Business Analyst	Ramyashree GV
Version	1.0
Date	22 June 2026

1. Purpose

The purpose of stakeholder interviews is to gather business requirements, understand current challenges, identify user expectations, and define the future-state solution requirements.

The information collected will be used for:

- Business Requirements Document (BRD)
- Functional Requirements Document (FRD)
- Dashboard Design
- Process Improvement

2. Interview Participants

Stakeholder	Interview Objective
Chairman	Understand strategic goals and success expectations
Principal	Understand academic reporting needs
Subject Teachers	Understand current assessment process
Academic Coordinators	Understand monitoring requirements
IT Support Team	Understand technical constraints
Project Manager	Understand project expectations

3. Chairman / Project Sponsor Interview Questions

Business Objectives:

1. What are the primary goals you want to achieve through this analytics system?
2. What challenges do you currently face while reviewing student performance?
3. What information do you require for strategic academic decisions?
4. How frequently do you want performance reports?
5. What would define the success of this project?

Reporting Requirements:

1. What key performance indicators should management monitor?

Examples:

- Average score
- Pass percentage
- Subject performance
- Student risk levels
- Improvement trends

Do you require comparison between:

- Classes?
- Subjects?
- Academic terms?
- Previous assessments?

Decision Making

1. How are academic improvement decisions currently made?
2. What information is missing from current reports?
3. What decisions should the dashboard help you make?

4. Principal Interview Questions

Current Process

1. How are student assessment records currently maintained?
2. Who prepares academic reports?
3. How much time is spent preparing reports?
4. What difficulties occur during report consolidation?

Student Monitoring

1. How are weak students currently identified?
2. At what stage are interventions provided?
3. What factors indicate that a student requires support?

Examples:

- Low marks
- Poor attendance
- Declining performance

Dashboard Requirements

1. What student information should teachers see?
2. What information should management see?
3. What reports are currently prepared manually?

5. Subject Teacher Interview Questions

Assessment Process

1. How are classroom assessments conducted?
2. How are marks recorded after evaluation?
3. What assessment types are used?

Examples:

- Unit tests
- Assignments
- Periodic exams
- Final exams

Data Management

1. How do you currently maintain student marks?
2. What challenges do you face while updating records?
3. How often are performance reports prepared?

Academic Analysis

1. How do you identify difficult chapters?
2. How do you identify students requiring additional support?
3. What insights would help improve teaching effectiveness?

Dashboard Usage

1. What information would be useful in your daily teaching activities?
2. Would chapter-level performance analysis help in lesson planning?
3. What filters would you need?

Examples:

- Class
- Subject
- Student
- Assessment type

6. Academic Coordinator Interview Questions

Monitoring Requirements

1. How do you currently monitor academic performance?
2. What reports do you review regularly?
3. How do you compare performance across subjects?
4. What academic trends are important to track?

Intervention Planning

1. How are improvement programs planned?
2. How do you track whether interventions are effective?
3. What student groups require special monitoring?

7. IT Support Interview Questions

Technical Requirements

1. What systems are currently available?
2. Where will academic data be stored?
3. What security requirements exist?
4. Who should have access to student information?

Implementation

1. What tools are approved by the school?
2. How frequently can data be refreshed?
3. Are there limitations regarding software installation?

8. Students Interview Questions

Learning Experience

1. How do you currently receive performance feedback?
2. Do you understand your strengths and weaknesses?
3. What type of feedback helps you improve?
4. Would progress tracking help your learning?

9. Interview Output

The information gathered from these interviews will help define:

Output	Document
Business needs	BRD
Functional requirements	FRD
User expectations	User Stories
Dashboard requirements	Solution Design
Acceptance criteria	UAT

10. Conclusion:

Stakeholder interviews provide essential information required to design a solution that addresses actual academic challenges and ensures successful adoption of the Student Performance Analytics & Decision Support System.
